

Best Image Quality – the "100% carefree package"

Microform GmbH goes for all-inclusive document capturing solutions

For Microform GmbH, this year's CeBIT in Hanover is all about all-inclusive solutions. For this specialist in document archiving will be presenting its "Best Image Quality" concept, a concept that encompasses the entire capturing process. Outstanding scanners are combined with powerful software to facilitate further processing of the images. But Microform's portfolio also includes consulting, the drawing-up of customized solutions, training, expert installation and maintenance of the equipment it markets.

Even the best hardware available isn't capable of performing successful and effective archiving of documents entirely on its own. This is why Microform is putting its weight behind its enhanced "**Best Image Quality**" concept – the all-inclusive solution for the entire capturing process. This concept is still based on the high-quality scanners of the MF S 415/455 and MF S 615/655 families, now in conjunction with the ingenious software from Janich & Klass that is perfectly configured to these units and their users' needs. With this system, you can not only convert documents of all kinds quickly and efficiently to high-quality images and archive them, you can also edit the scanned images directly during the scanning process in preparation for subsequent processing steps on the basis of noncompressed color image formats.

But it doesn't stop there, because there's one thing – in addition to quality and economy – that counts above all else in the eyes of the capturing specialists at Microform: the user. "For us, Best Image Quality begins right from the consulting phase", explains Marketing Director, Roland Reinberger. "We sit down with our customers and discuss every last detail. Together we draw up the perfect, fully customized solution for their specific field of operation." But this isn't the end of the line for Microform's intensive consulting services. Expert installation and maintenance of Microform's systems as well as training for their users are a matter of course. Even details such as ergonomic workplaces get the full treatment. "Only when every single detail is spot on and our customers are happy can we also be happy with our work", stresses Reinberger.

With its enhanced "**Best Image Quality**" concept, Microform provides complete, efficient and tailor-made capturing solutions for production-oriented service and in-house applications. In this way, Microform has once again proved that the combination of experience and innovation produces the best answers to the needs of demanding customers.

This marketing company for archiving systems was founded back in 1994 – initially with the aim of ensuring the production and sales of Agfa's successful ADMIS CD 51 Rotary Camera for microfilms. Since then, Microform GmbH has continuously developed and enlarged its product range of microfilm cameras, hybrid scanner/microfilm cameras and high-end document scanners.

You can find Microform GmbH in Hall 1 on Stand 4c1 at this year's CeBIT in Hanover.
